A comprehensive reference guide to planting and caring for our best selling palms

Welcome to our Palmco Big Palm Catalogue.

This is a comprehensive guide to 22 of our best selling palms - we hope you find it a useful aid in choosing, planting and caring for your palms. By referring to our handy symbols, you can choose the palms that best suit your particular situation. Whether you are on a hill, by the sea or suffer from strong winds and heavy frosts, you can carefully choose the ideal palm for your garden.

If you still want more information about a particular palm, you can visit our website which has information on the different sizes of palm we stock. Alternatively, use our freephone number and speak to one of our friendly and knowledgeable staff.

Palmco is one of the largest palm nurseries in New Zealand with over 60 acres of big palms in production. So if you can't find what you are after, come in and see us in Auckland or Kerikeri - we're happy to help you find the perfect palm for your place.

Please note: all heights quoted are after approximately 10 years growth.

King Palm *Archontophoenix alexandrae*

Common name: King Palm
Species: *Archontophoenix alexandrae*
Also known as: Alexandra Palm

Situation: Grows well in part shade to full sun. Likes regular watering while getting established. Prefers a reasonably sheltered site and will tolerate light frosts. Mulch well and fertilise in spring/summer with a fertiliser such as 'Palmgrow'.
Usage: A fantastic landscape palm especially when planted in groups. Suitable for patio and tub containers with regular watering.

Description: A tall and slender, classic looking palm with an attractive light coloured trunk, topped with a fresh green crownshaft and leaves. Very lush and tropical looking. The leaves have silver undersides. Height to about 6 metres in approximately 10 years. Especially attractive when planted in groups. A good sized palm for smaller gardens.

- Prefers full sun, but will tolerate part shade.
- Tolerates light winds.
- Will tolerate light frosts.
- Requires adequate moisture.
- Grows to a height of 6 metres.

Bangalow Palm *Archontophoenix cunninghamiana*

Common name: Bangalow Palm
Species: *Archontophoenix cunninghamiana*
Also known as: Piccabeen Palm

'water carrying basket'; the crown-shaft can be fashioned, with a few folds and tucks into a watertight vessel, the petiole used as the handle.
Situation: Grows well in part shade to full sun. Likes regular watering while getting established. Tolerant of moderate frost, but prefers shelter from wind. Mulch well and fertilise in spring/summer with a fertiliser such as 'Palmgrow'.
Usage: Fantastic landscape palm especially when planted in groups. Great for smaller gardens. Also suitable for patio tubs and containers with regular watering.

Description: An extremely popular palm, with a tall and slender, grey brown banded trunk and green spreading fronds. Mauve flowers followed by red fruit also give seasonal interest. Height to about 6 metres. Especially attractive when planted in groups. A good sized palm for smaller gardens.

Interesting Fact: The name 'bangalow' is aboriginal for

- Prefers full sun, but will tolerate part shade.
- Tolerates light winds.
- Tolerates medium frosts.
- Requires adequate moisture.
- Grows to a height of 6 metres.

Bismarck Palm *Bismarckia nobilis*

Common name: Bismarck Palm
Species: *Bismarckia nobilis*

frost but requires plenty of heat to grow well. Water over summer until established.
Usage: One of the most impressive of all garden plants, the Bismarck Palm can be used as a stand alone feature plant in landscaping.

Description: The Bismarck Palm is a stunning species from the island of Madagascar. Its massive grey fan leaves can be up to 3 metres across and it is becoming a familiar sight in warm climate gardens around the world. Slow growing in our climate, but well worth the wait.

Situation: Requires a full sun location, sheltered from strong winds, and with good drainage. Will tolerate some

- Prefers full sun, but will tolerate part shade.
- Tolerates light winds.
- Requires light to medium moisture (once established).
- Will tolerate light frosts.
- Grows to a height of 3 metres.

Blue Hesper Palm *Brahea armata*

Common name: Blue Hesper Palm
Species: *Brahea armata*
Also known as: Mexican Blue Palm

Description: One of the most stunning of palms, with large blue/grey leaves up to 2 metres across. Native to Mexico, *Brahea armata* will tolerate heat and drought when established and is also tolerant of heavy frosts. Mature plants send out long arching branches of many small whitish blossoms beyond the leaves making quite an impressive display.

Situation: It is a very hardy palm that will handle sun, drought and frost and is also tolerant of strong winds. Prefers full sun. Water in summer until established.

Usage: Use as a stand alone feature plant in landscaping, or make a stunning group. Looks good in desert and rock gardens.

-  Prefers full sun, but will tolerate part shade.
-  Will tolerate high winds.
-  Requires little moisture and is drought tolerant.
-  Will tolerate heavy frosts.
-  Grows to a height of 3 metres.

Jelly Palm *Butia capitata*

Common name: Jelly Palm
Species: *Butia capitata*
Also known as: Pindo Palm, Wine Palm

Description: Stunning grey/blue leaved palm with arching foliage. A very hardy feature palm that tolerates most conditions, being hardy to drought, wind and frost. An ideal specimen tree for any garden. Grows up to 4 metres.

Interesting Fact: In its native home in Southern Brazil and Uruguay its large orange to yellow fruit is often used for jam (jelly) making or fermented into wine and can be

eaten raw. The fruit is also popular with birds.

Situation: It is a very hardy palm that will handle coastal conditions, strong winds, dry soil as well as heavy frost (to about -10°C). Prefers full sun. Water over summer until established.

Usage: Commonly used as a stand alone feature plant in landscaping and also good for street planting. Useful for exposed locations.

-  Prefers full sun, but will tolerate part shade.
-  Will tolerate high winds.
-  Tolerates low moisture.
-  Will tolerate heavy frosts.
-  Tolerates coastal conditions, including salt spray.
-  Grows to a height of 4 metres.

Chinese Fishtail Palm *Caryota ochlandra*

Common name: Chinese Fishtail Palm
Species: *Caryota ochlandra*

Description: A unique and fast growing palm from the Canton region of China. The Chinese Fishtail Palm has a slender white trunk topped with beautiful 'fishtail' leaves in a cascading crown. This is one of the hardier *Caryota*'s tolerating full sun, light frost and some wind. Grows to 6 metres after 10 years.

Situation: Grows best in full sun, but will tolerate some

shade. Likes regular watering while getting established. Tolerant of moderate frosts and wind. Mulch well, and as they are heavy feeders, fertilise in spring/summer with a fertiliser such as 'Palmgrow'.

Usage: Will add a special tropical touch to the garden. Can be used as a stand alone specimen or planted in groups.

-  Prefers full sun, but will tolerate part shade.
-  Medium wind tolerant.
-  Tolerates medium frosts.
-  Requires adequate moisture.
-  Grows to a height of 6 metres.

Mediterranean Fan Palm *Chamaerops humilis*

Common name: Mediterranean Fan Palm
Species: *Chamaerops humilis*
Also known as: European Fan Palm

Description: A low growing, usually multi-stemmed palm from around the Mediterranean. Their low height and hardy nature make them a favourite with landscape designers.

Situation: One of the toughest of all palms, tolerating heavy frost and occasional snow as well as coastal salt laden wind, and still look fantastic. Will take drought conditions once established. Not suitable for very wet positions.

Usage: Versatile and beautiful! Manicured plants have a very strong form and make a stunning feature specimen. In their natural form they make a great leafy background, particularly useful in more challenging garden situations. Useful as a screen or dense hedge. Quite salt resistant and may be grown near the ocean. Ideal for a container or pots, due to its drought resistance and durability to heat and cold.

-  Prefers full sun.
-  Will tolerate high winds.
-  Will tolerate heavy frosts.
-  Tolerates low moisture (once established).
-  Tolerates coastal conditions.
-  Grows to a height of 2 metres.

Dragon Tree *Dracaena draco*

Common name: Dragon Tree
Species: *Dracaena draco*
Also known as: Dragon's Blood Tree

windy or exposed sites where other plants may struggle. Dracaenas thrive in pots as well and can remain in a pot for many years and can be replanted at any stage. It is highly resistant to diseases and pests.

Description: One of the most stunning and architectural of plants, with a smooth, concrete grey trunk and a compact head of grey/green strap-like leaves.

Situation: Incredibly hardy to drought, wind and coastal conditions. Very easy to grow, provided it gets reasonable drainage and full sun.

Usage: Fantastic as a landscape feature, particularly in

- Prefers full sun, but will tolerate part shade.
- High wind tolerant.
- Tolerates medium frosts.
- Tolerates low moisture.
- Tolerates coastal conditions.
- Grows to a height of 3 metres.

Sugar Cane Palm *Dypsis baronii*

Common name: Sugar Cane Palm
Species: *Dypsis baronii*
Also known as: Hardy Cane Palm

Situation: It prefers a rich, moist soil with adequate water and drainage. It grows well both in shade and full sun, and will tolerate light frosts when established. Likes a sheltered location.

Usage: Becoming increasingly popular as a garden palm because of its smaller size and attractiveness. Perfect for under-planting taller palms or for use in smaller spaces.

Description: A beautiful medium sized clumping species, the Sugar Cane Palm has attractive smooth, slender green stems topped with a yellow crownshaft and fine dark green leaves. Similar in size and form to its close relative, the pan-tropically grown Golden Cane Palm (*Dypsis lutescens*), but much better suited to our climate.

- Prefers full sun, but will tolerate part shade.
- Tolerates light winds.
- Will tolerate light frosts.
- Requires adequate moisture.
- Grows to a height of 3 metres.

Kentia Palm *Howea forsteriana*

Common name: Kentia Palm
Species: *Howea forsteriana*
Also known as: Sentry Palm, Paradise Palm

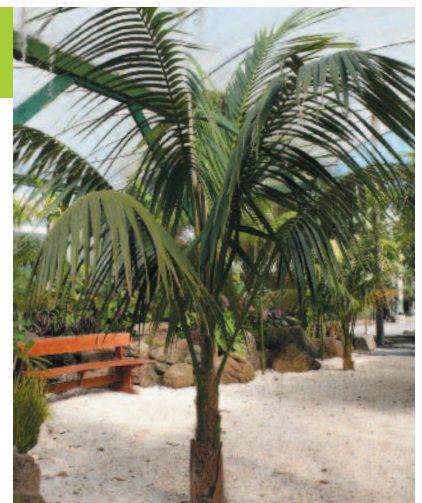

feeding will encourage steady growth and is essential in exposed locations to ensure success. Also one of the best indoor palms tolerating low light and neglect.

Usage: Planted singly or in groups, their elegant pendant fronds and slender, green banded trunks will give a real tropical, 'south seas island' look to the garden. They don't grow too tall and are suitable for smaller gardens. Kentia Palms also make superb indoor plants tolerating low light and low humidity. Give them a month's rest in a shady place outdoors a couple of times a year to keep them happy (and don't forget to water them!).

Description: From Lord Howe Island in the South Pacific, the Kentia is one of the most popular palms in the world. Its elegant pendant fronds and slender, green, banded trunk make it a beautiful addition the garden.

Situation: Although very elegant and beautiful, the Kentia Palm is surprisingly tough, tolerating coastal conditions once established. They prefer to grow in part shade when young and gradually acclimatise to the sun. Regular watering and

- Excellent indoor palm.
- Prefers full sun, but will tolerate part shade.
- High wind tolerant.
- Requires adequate moisture.
- Will tolerate light shade.
- Tolerates coastal conditions.
- Grows to a height of 4 metres.

Pineapple Zamia *Lepidozamia peroffskyana*

Common name: Pineapple Zamia
Species: *Lepidozamia peroffskyana*
Also known as: Scaly Zamia

Usage: Makes an impressive feature plant, great under taller palms or anywhere that a bold statement is needed.

Description: A large and stunning cycad with glossy dark green leaves that can grow up to 2 metres long. A real show stopper! Foliage is soft to the touch. Mature plants produce cones that resemble large pineapples.

Situation: Plant in a well drained position in part shade to full sun.

- Prefers full sun, but will tolerate part shade.
- Medium wind tolerant.
- Low moisture requirement (when established).
- Tolerates medium frosts.
- Grows to a height of 2 metres.

Australian Fan Palm *Livistona australis*

Common name: Australian Fan Palm
Species: *Livistona australis*
Also known as: Australian Cabbage Palm

Description: This large and stately palm has a full crown of dark green fan shaped leaves above a beautifully textured brown trunk.

Situation: It is a very hardy palm and will tolerate most conditions including heavy frosts and coastal winds. The Australian Fan Palm is not particular about soil and grows happily in heavy clay and will grow faster if adequate water is

available. Fertilise twice a year in spring and summer with a good quality slow release fertiliser that contains micro-nutrients such as 'Palmgrow'.

Usage: Good as a feature palm where a hardy species is required, for avenue planting and for providing shelter and structure in larger gardens.

-  Prefers full sun, but will tolerate part shade.
-  High wind tolerant.
-  Tolerates heavy frosts.
-  Requires adequate moisture.
-  Tolerates coastal conditions.
-  Grows to a height of 5 metres.

Chinese Fan Palm *Livistona chinensis*

Common name: Chinese Fan Palm
Species: *Livistona chinensis*
Also known as: Fountain Palm

Description: This palm from Southern Japan, Taiwan and islands in the South China Sea is as tough as it is beautiful. The wide crown of broad, bright green leaves with cascading tips gives it its other name - the Fountain Palm.

Situation: It is a very hardy palm and will tolerate most conditions including moderate frosts and coastal winds. The Chinese Fan Palm is not particular about soil, but will grow

faster if adequate water is available. Fertilise twice a year in spring and summer with a good quality slow release fertiliser that contains micro-nutrients such as 'Palmgrow'.

Usage: Being slow to get height the Chinese Fan Palm is great for underplanting taller palms, and as a lush leafy filler or screen.

-  Prefers full sun, but will tolerate part shade.
-  High wind tolerant.
-  Medium frost tolerant (once established).
-  Requires adequate moisture.
-  Tolerates coastal conditions.
-  Grows to a height of 3 metres.

Senegal Date Palm *Phoenix reclinata*

Common name: Senegal Date Palm
Species: *Phoenix reclinata*
Also known as: Wild Date Palm

Description: The Senegal Date Palm is very versatile having a slender trunk, either clumping or sometimes single, and a crown of fine, arching, grey-green leaves with bright orange leaf bases.

Situation: Plant in full sun with plenty of space and water. This palm will thrive in a wide range of conditions being

tolerant of coastal and windy locations and considerable frost.

Usage: Use this tree as a dramatic specimen plant. Single trunked specimens are great for avenue planting, while clumping plants have a more relaxed informal appearance. For fast growth fertilise in spring and summer with 'Palmgrow' which has been developed specifically for Palmco palms.

-  Prefers full sun, but will tolerate part shade.
-  High wind tolerant.
-  Heavy frost tolerant.
-  Requires adequate moisture.
-  Tolerates coastal conditions.
-  Grows to a height of 4 metres.

Miniature Date Palm *Phoenix roebelenii*

Common name: Miniature Date Palm
Species: *Phoenix roebelenii*
Also known as: Pygmy Date Palm

Description: This beautiful and feathery miniature palm is one of the most popular of palms both indoors and out. Small growing with a slender trunk and a full crown of lovely fine leaves, this species can easily be accommodated in the smallest of gardens.

Situation: This delightful little palm is a favourite landscaping plant because it will tolerate a wide range of

conditions, is low growing and very pretty. Grows in full sun to shade and tolerant of wind and light frost.

Usage: An excellent choice for under-planting taller palms or for smaller garden areas, also a low maintenance container plant for indoors or on the patio.

-  Prefers full sun, but will tolerate part shade.
-  Medium wind tolerant.
-  Medium frost tolerant.
-  Requires adequate moisture.
-  Tolerates coastal conditions.
-  Grows to a height of 1.5 metres.

Silver Date Palm *Phoenix sylvestris*

Common name: Silver Date Palm
Species: *Phoenix sylvestris*
Also known as: Wild Date Palm, Sugar Date Palm

Description: Looking somewhat like a more robust form of the commercial Date Palm, the Silver Date has an attractive orange hued, medium sized trunk, topped off with a dense crown of silver toned leaves.

Interesting Fact: A very useful species as the fruit from this palm species is used to make wine and jelly. The sap is tapped and drunk fresh or fermented into toddy or boiled to

make palm jaggery.

Situation: Plant in full sun with plenty of space and water until established. When mature this palm will withstand considerable drought, wind and heavy frosts.

Usage: Use this tree as a dramatic specimen plant or for avenue planting. Particularly good at creating a Mediterranean or Middle Eastern ambiance. For fast growth fertilise in spring and summer with 'Palmgrow' which has been developed specifically for Palmco palms.

-  Prefers full sun.
-  High wind tolerant.
-  Heavy frost tolerant.
-  Tolerates low moisture.
-  Tolerates coastal conditions.
-  Grows to a height of 4 metres.

Majestic Palm *Ravenea rivularis*

Common name: Majestic Palm
Species: *Ravenea rivularis*

Description: A fast growing palm from Madagascar with a smooth whitish trunk that is flared at the base, giving it a unique and exotic appearance. It has a compact crown of finely divided leaves.

Situation: The Majestic Palm requires a fertile and sheltered location with plenty of moisture to grow to

perfection. A good choice for planting near rivers and conditions with wet soils. A heavy feeder it should be fertilised regularly with a balanced fertiliser such as 'Palmgrow'. Will grow happily in full to half day sun.

Usage: The Majestic Palm looks good as a specimen and also in groups. Use when a fast growing and stately palm is required with a tropical appearance.

-  Prefers partial shade, but will tolerate full sun.
-  Tolerates light winds.
-  Will tolerate light frosts.
-  Requires heavy watering.
-  Grows to a height of 4 metres.

Nikau Palm *Rhopalostylis sapida*

Common name: Nikau Palm
Species: *Rhopalostylis sapida*
Also known as: Feather Duster Palm

Description: New Zealand's iconic native palm, with its distinctive crown of upright leaves and rounded crownshaft. The subject of numerous works of art, sculpture and architecture, the Nikau is an essential plant for both the native and sub-tropical garden. Bright red fruit are particularly attractive to birds.

Situation: The Nikau prefers to establish a shady position

and gradually grow into the sun. More advanced specimens are alright planted directly in sun. Water well until established. Off-shore and southern forms of Nikau are wind and full sun tolerant.

Usage: An absolute must for any sub-tropical or native garden. Use where a strong formal or structural element is required, either as a specimen or in group planting. Looks equally at home with ferns and other palms or with rocks and groundcovers. Mulch well.

-  Prefers filtered light when young, but will grow in full sun.
-  Medium to high wind tolerant.
-  Will tolerate light frosts.
-  Requires adequate moisture.
-  Grows to a height of 3 metres.

Chatham Island Nikau *Rhopalostylis sp*

Common name: Chatham Island Nikau
Species: *Rhopalostylis sp*
Also known as: Pitt Island Nikau, Feather Duster Palm

Description: A superior form of New Zealand's iconic native palm, with its distinctive crown of upright leaves and rounded crownshaft. The subject of numerous works of art, sculpture and architecture, the Nikau is an essential plant for both the native and sub-tropical garden. Bright red fruit are particularly attractive to birds.

Situation: Generally Nikau Palms prefer to start off with

some shade and gradually grow into the sun. More advanced specimens are alright planted directly in sun. Water well until established. The Chatham form of Nikau is faster growing and considerably more wind tolerant than other varieties and is a good choice for coastal areas, provided adequate moisture is available.

Usage: An absolute must for any sub-tropical or native garden. Use where a strong formal or structural element is required, either as a specimen or in group planting. Looks equally at home with ferns and other palms or with rocks and groundcovers. Mulch well.

-  Prefers shade when young, but will tolerate full sun.
-  High wind tolerant.
-  Requires adequate moisture.
-  Tolerates coastal conditions.
-  Will tolerate light frosts.
-  Grows to a height of 3 metres.

Queen Palm *Syagrus Romanzoffiana*

Common name: Queen Palm
Species: *Syagrus Romanzoffiana*
Also known as: Cocos Palm

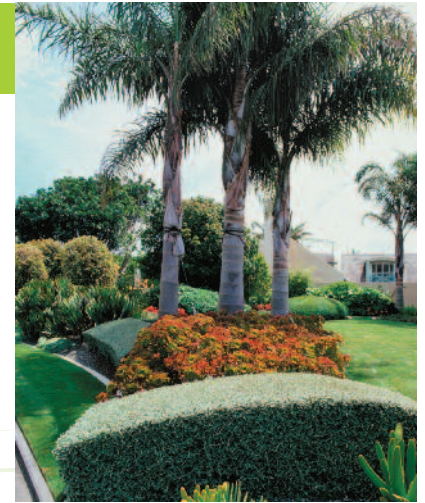

Description: The smooth, grey, stately trunks of the Queen Palm topped with an arching crown of dark green feathery fronds make it one of the most popular palms in New Zealand gardens.

Situation: One of the faster growing palms, the Queen Palm will grow in a range of soils and climates, provided there is adequate drainage. They are hardy to moderate

frost and considerable wind. A position in full sun is best. Generous watering and feeding while young will reward you with fast growth and robust, healthy plants.

Usage: Place Queen Palms where a bold statement is required and it's beautiful arching crown has room to spread. Their fast growth is great for quickly getting maturity in the garden and creating the framework for smaller, slower growing species. Often used for driveway avenue planting and street planting.

- Prefers full sun, but will tolerate part shade.
- Will tolerate high winds.
- Medium frost tolerant.
- Requires adequate moisture.
- Grows to a height of 6 metres.

Windmill Palm *Trachycarpus fortunei*

Common name: Windmill Palm
Species: *Trachycarpus fortunei*
Also known as: Chusan Palm

Description: From China the Windmill Palm is a very hardy plant and one of the most frost tolerant palms available. It has a full crown of flat circular leaves and a slender trunk covered with fibres. The trunk fibres can be removed to give this common palm a very different and exotic appearance. A height of about 4 metres can be achieved in 10 years.

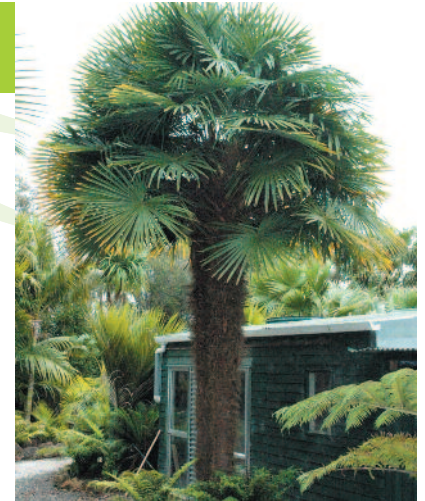

Interesting Fact: The Windmill Palm is probably the most

cold hardy palm in cultivation, with mature specimens known to survive temperatures as low as -25°C.

Situation: Windmill Palms grow in a range of soil types and climates. Tolerant of heavy frost and moderate wind but not wet feet. For best results fertilise in spring and summer with 'Palmgrow'.

Usage: Good for smaller gardens and filling in spaces between larger plants. They are suitable both as a single specimen or group planted for a more informal effect. Always good value for money.

- Prefers full sun, but will tolerate some shade.
- Medium wind tolerant.
- Tolerates heavy frosts.
- Requires adequate moisture.
- Tolerates coastal conditions.
- Grows to a height of 4 metres.

Cotton Palm *Washingtonia robusta*

Common name: Cotton Palm
Species: *Washingtonia robusta*
Also known as: Skyduster Palm, Washington Palm

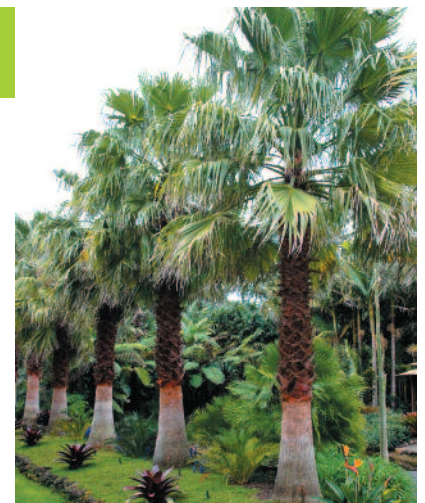

Description: Naturally from Mexico, *Washingtonia robusta* is the skyscraper of palms, a familiar sight in the streets of Los Angeles. Leafbases and young trunks are a rich orange colour, becoming grey with age. They have a full crown of large fan leaves with drooping ends.

Situation: Cotton Palms are particularly hardy and fast growing. Suitable for planting in exposed and windy, or frosty

situations.

Usage: A very stately tree, great for row, street and driveway plantings. In larger gardens they can provide a fast growing garden framework, shelter and screening. Ideal for coastal situations as it will handle wind and sea sprays.

- Prefers full sun, but will tolerate part shade.
- Tolerates high winds.
- Requires adequate moisture.
- Tolerates heavy frosts.
- Tolerates coastal conditions, including sea spray.
- Grows to a height of 5 metres.

Palmco's BIG Field Grown Natives

Common names: Pohutakawa, Karaka, Titoki, Cabbage Tree, Kowhai, Puriri, Puka.
Species: *Metrosideros, Corynocarpus, Alectryon, Cordyline, Sophora, Vitex, Meryta*

Description: The big name in palms now has **BIG** natives. Robust, healthy, field grown natives that will establish quickly and make a **BIG** impact on your next landscape project. Next time you need big natives, take a look at Palmco's wide selection. Hand pick your own trees or take advice from our staff.

Palmco's Sean and Pokai are justifiably proud of this superb specimen of a Puriri, nurtured and expertly prepared by them, and destined for another of New Zealand's top gardens.

BIG REALLY IS BEAUTIFUL!

Nothing creates a bigger impact than a big palm and in today's 'want-it-now' world, big palms can create that lush, tropical look instantly. Here at Palmco we specialise in growing big, bold, beautiful palms. From commercial landscapes to residential gardens, streetscapes to parks, big palms from Palmco are an investment worth making. Palmco is one of the largest palm nurseries in New Zealand with over 60 acres of large palms in production. We also stock an excellent variety of small containerised palms at very affordable prices that can be purchased through our stores.

Palmco's palm nursery in Kerikeri features our very own Garden of National Significance.

Designed and created by our talented and award-winning landscaping division, it is the ideal place to visit and get ideas for your own backyard. The gardens now feature a weekend café and a stunning licensed and fully catered venue for weddings and other functions. So if you're looking for inspiration and new ideas please feel free to visit us Palmco, 32 Wiroa Road, Kerikeri. Our Gardens & Big Palmco Shop are open seven days a week from 10am - 4pm. Alternatively to view our product in Auckland visit us at our NEW Palmco Outdoor Living Centre at 360 Church St, Penrose (next to MacDonalds). We look forward to meeting you and helping you plan your very own subtropical paradise.

BIG NEWS IN AUCKLAND!

Our new Palmco Outdoor Living Centre is now open in Auckland. Crammed full of great garden ideas, our garden experts can help you achieve the garden of your dreams. Whether it's plant selection or care, advice on landscaping, landscape design or even just a new plant pot, the Palmco Outdoor Living Centre has it all. Of course any Palmco store isn't complete without NZ's biggest range of quality field grown palms. You can see them all at 360 Church St, Penrose - all ready for delivery to your place!

Growing healthy palms

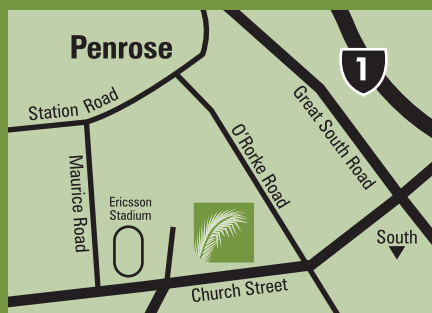

Especially formulated for Palmco, **Palmgrow** is a controlled release fertiliser which is ideal for the season-long feeding of all palms. It is easily hand-spread around the drip-line of the tree and usually applied in spring and summer. Talk to our knowledgeable staff about the right application rate for your palm, or visit our website to find out more, or order Palmgrow bags to be sent to you by post. Its as easy as that!

Frost and cooler climates

For those of you who live in more frost prone parts of the country, Palmco can recommend the best palm for your particular situation. A number of our palms will tolerate heavy frosts, so refer to the symbols with each palm for guidance, visit our website, or talk to our staff who can advise on which palms would be best.
