The Forest Stewardship Council (FSC) is an independent, not for profit, non-government organization based in Bonn, Germany.

The mission of the Forest Stewardship Council is to support environmentally appropriate, socially beneficial, and economically viable management of the world's forests.

FSC develops, supports and promotes international, national and regional standards in line with its mission; evaluates, accredits and monitors certification bodies which verify the use of FSC standards; provides training and information; and promotes the use of products that carry the FSC logo.

INTRODUCTION

This document shall be used as an addendum to “FSC-STD-40-004 Version 2: FSC Standard for Chain of Custody Certification” for the purpose of classifying FSC *product groups* and/or the included products by their wood species.

The FSC *species terminology* is a compilation of the scientific and common names of tree species commonly used in the international trade, sorted according to their overall category ('conifers' vs. 'deciduous'), genus/species and existing varieties.

The hardwood species terminology follows the database compiled by RICHTER, H.G., and DALLWITZ, M.J. (2000 onwards): "Commercial timbers: descriptions, illustrations, identification, and information retrieval. In English, French, German, Portuguese, and Spanish. Version: 16th April 2006" which is available online at <http://delta-intkey.com>.

The softwood species (conifers) terminology is currently based on an innovative digital tool for macroscopic wood identification and information retrieval "macroHOLZdata – computergestützte Bestimmung und Beschreibung von Nutzhölzern" developed by RICHTER, H.G. and OELKER, M. from the University of Hamburg in cooperation with the "Institut für Holzbiologie und Holzschutz" of the *Bundesforschungsanstalt für Forst- und Holzwirtschaft* (BFH).

The addendum will be updated at regularly intervals in order to reflect new scientific findings, additional translations and the increasing range of timber species available as FSC-certified.

This document is still in an early development stage. Further information on tree species, translations and trade names as well as on CITES status will be provided with the next update in 2008.

For this purpose, FSC specifically welcomes comments on any additional sources of relevant information on tree species commonly used in the international trade.

Scientific names and common translations

NOTE: The country codes used as abbreviations of the country names where the respective species occurs are based on "ISO 3166 Code Lists - English Country Names and Code Elements". This list can be found on the ISO homepage at:

http://www.iso.org/iso/country_codes/iso_3166_code_lists/

In few cases, i.e., when regions rather than individual countries are indicated, other abbreviations are used, for instance "nAm" for North America.
